

General Description

By **Stellarnet**

FunVoiceMail is an Intelligent Mobile Phone Manager that allows users to have full control of all incoming calls when they are not available to answer their mobile phones. It provides a wide range of greetings for users to greet their callers and a complete management of voice mails left. Running on the most popular Symbian phones, this Symbian Signed mobile application provides users with the peace of mind of an officially certified application.

FEATURES	BENEFITS
Easy download and registration	Product ready to be used within a few minutes
Complete management of unanswered calls	Great variety of options for the user to choose from when he/she does not answer a call
Very user-friendly application	Users will be able to use FVM in a very intuitive manner, saving the hassle of going through long and complicated user manuals
Profile Settings for default, individual & group	By creating different for different callers, users can fully customize the response of their phones when they don't answer calls
Great variety of greetings	Users can either play their own recorded messages, pre-recorded FVM greetings, or just download and play a favorite MP3 file
Automatic SMS when a called is not answered.	Today most people reject calls when they are in a meeting or otherwise unable to answer the call leaving the caller wondering why they did not answer. FVM allows users who reject a call to automatically send an SMS to inform callers of why the call was unanswered.
Choice of ringing time from 1-60 seconds	User can control for how long the phone must ring before performing certain action. Great feature that allows users to set a standard ring time for everyone else but a longer ring time for loved ones to make sure they don't miss their calls
Management of Voice Mails left by callers	<ul style="list-style-type: none">- User can listen to them FOC- User can share Voice Mail with other people via bluetooth or via MMS- User can store them in several locations: phone main memory or memory card- Voice Mails are stored for an unlimited time

	- Transfer to PC using data cable and then can be emailed to anyone
Recording of personalized greetings	User can greet the callers with his/her own voice
Variety of profile options available	Profiles can be set with different settings. e.g. <ol style="list-style-type: none"> 1. Reject call after X seconds of ringing or reject immediately 2. Answer call and play greeting after X seconds of ringing or no ring 3. Answer call, play greeting and allow caller to leave a message 4. Answer call, play greeting and end call
Contact information extracted from the Phone Book	Users don't need to create new contacts to use FVM but they can use it with their existing phone book
Choice of callers who can leave a voice mail or not	Users will only receive voice mails from selected callers
Voice mails left directly in your phone	Great money saver since users will no longer have to pay to listen to their voice mail messages.
Multi-lingual features	Users can decide the language of their FVM. Currently available in English, Malay and Chinese.
Anti-piracy features	Users can rest assured that your FVM will not be copied to any other phone. It is locked to your phone IMEI number so if someone tries to transfer the application to other phone, FVM will be blocked
